Category:			**Estimated time:**	0.00 hour
Target version:	0.1			

Description

Implement site_dump command and documentation. This management command is intended to be an enhanced version of the existing dumpdata command with at least the following enhancements:

- Use natural keys by default.
- Output a model's natural key alongside the primary key.
- Create an archive containing media files alongside the serialized database records.
- Better handling of model inheritance (dump all fields vs. only local ones).
